Declaration of Principles

The undersigned residents and taxpayers of the Warren District hereby enroll themselves as members of the Citizens' Protective League, the purpose of which shall be to promote better city and county government; to preserve order and enforce law; to reduce taxes and to foster and protect the best interests of the district without discrimination against any man because of his membership or non-membership in any organization or society.

Persons desiring to sign this declaration and become members of the Citizens' Protective League, can find list for signature at any business house of a member of the League.

SHORT COURSE FOR MINERS TO RESUME AT THE UNIVERSITY

Work Will Reopen at Tucson Institution on October 30—Plan Adopted Last Year Will Be Changed in Detail.

The short course for miners at the University of Arizona starts on October 30th. Last year the short course was initiated upon a new plan—two weeks were devoted to every subject given, each subject relating directly to the one preceding and following it. This year the arrangement will be somewhat different. Last year the first six weeks were devoted to blow-pipe analysis, mineralogy and elementary geology, and it was found that almost all students attended the three courses. Hence, this year from October 30th to December 2 these three subjects will be given simultaneously. The same applies to field geology, assaying and metallurgy courses, the flotation and the miners' courses.

The object of these courses is to give the working men of the state an opportunity of attending the university for a short period, in order to get in concentrated form information and training that will enable them to better their own positions. To many of these men practical knowledge has formed the major part of their education, while the fundamental principles on which their practical work depends is unknown to them. Because a man knows many minerals is precisely the reason why he should take a course in mineralogy. Many of our prospectors know much geology, but it is surprising what the past has revealed in the short course in geology. The University is organized to reach people and to serve the people, and the short course is one of its many ways of so doing.

NOTICE OF ANNUAL MEETING
Notice is hereby given that the annual meeting of the stockholders of the Wolverine & Arizona Mining Company will be held at the office of the Company, Maze Bldg., Bisbee, Arizona, Wednesday, November 8, 1916, at 12 o'clock M., for the election of nine directors for the ensuing year, and for the transaction of such business as may lawfully come before the meeting. Transfer books will close Wednesday, October 25, 1916, and will open again on Thursday, November 9th, 1916.

Dated Calumet, Michigan, October 1, 1916. Charles Chynoweth, Secretary.—Advertisement. 487

WILL RESUME OPERATIONS
PRESCOTT, Oct. 14.—Plans to resume operations at its milling plant, which is to be equipped with steam power are being considered by officials of the Octave Mining company. Decision to reopen the mill followed the determination of a large tonnage of ore in the new workings, which extend to a depth of 1200 feet.

High values in lead, zinc, silver and gold have been struck on the property of the Silver Belt Consolidated, which was taken over a month ago by W. E. Paige. The property is to be equipped at once with a 50 ton mill to treat the complex ores.

MIDDLE GOLCONDA WORK.
CHLORIDE, Ariz., Oct. 14.—Rich lead and zinc ore has been struck in the lower crosscut at the Middle Golconda mine. While the width of the deposit has not yet been determined, there are indications that it is one of the largest yet found. The Middle Golconda is now shipping a car of ore a week.

MEAT CAUSE OF KIDNEY TROUBLE

Take a glass of Salts if your Back hurts or Bladder bothers—Meat forms uric acid.

If you must have your meat every day, eat it, but flush your kidneys with salts occasionally, says a noted authority who tells us that meat forms uric acid which almost paralyzes the kidneys in their efforts to expel it from the blood. They become sluggish and weaken, then you suffer with a dull misery in the kidney region, sharp pains in the back or sick headache, dizziness, your stomach sours, tongue is coated and when the weather is bad you have rheumatic twinges. The urine gets cloudy, full of sediment, the channels often get sore and irritated, obliging you to seek relief two or three times during the night.

To neutralize these irritating acids, to cleanse the kidneys and flush out the body's urinous waste get four ounces of Jad Salts from any pharmacy here; take a tablespoonful in a glass of water before breakfast for a few days and your kidneys will then act fine. This famous salt is made from the acid of grapes and lemon juice, combined with lithia, and has been used for generations to flush and stimulate sluggish kidneys, also to neutralize the acids in urine, so it no longer irritates, thus ending bladder weakness.

Jad Salts is inexpensive; cannot injure, and makes a delightful effervescent lithia-water drink.

RICH STRIKE IN UNITED ARIZONA

Superintendent Holland wired the Douglas office that he had penetrated three feet into a body of copper ore running 12½ per cent in the cross-cut at the 150 foot level, proving the contention of the Company and the prediction of the engineers for this level. Since these same engineers have predicted high grade sulphides at the water level, the findings at the 150 foot level are highly gratifying.

The United Arizona warrants the fullest investigation. It has produced the results and has the ore.

APPLICATION HAS BEEN MADE FOR LISTING ON THE NEW YORK CURB.

RAPID DEVELOPMENT.

One of the remarkable things about the United Arizona is its rapid development. The company was organized about six months ago, and in the short time since has financed its operations, sunk its shaft to a depth of 170 feet, and run its first cross-cut a considerable distance. The policy of the company is to push the development as rapidly as possible. They will sink the shaft to the 1000 or 1200 foot level. They expect to reach the permanent water level near the 400 foot depth, and if not delayed should reach it around the first of the year. The mine is equipped with all necessary machinery and has two shifts working every day. The stockholders can rest assured that every effort will be put forth to place the mine on a paying basis as soon as possible.

RICH STRIKE IN THE United Arizona

REPORTS OF ENGINEERS

Three mining engineers have reported on the property. All agree that large bodies of high grade ore should be found with depth.

S. S. BADGER, of Douglas, in his report made July 1, 1916, says: "There are four porphyry dykes crossing the property, having a width from 40 to 300 feet. There are 26 quartz veins traversing the property, ranging in width from 12 inches to 3 feet. The mineralization over the claims is pronounced and positive. Assays taken from the various openings and where the sulphides crop on the surface run from 2 to 40 per cent copper."

G. W. MILLER, of Los Angeles, California, in his report, made Aug. 15, 1916, compares the formation in the United Arizona to that of the United Verde, Poland, and Butte, Montana, mines, and gives it as his opinion that it is not extravagant to conclude that like conditions will produce like results.

F. W. GIROUX, formerly with Senator Clark and the United Verde, says: "On the several claims of the property are found numerous quartz veins. All these veins contain gold, silver, copper and lead. I am of the opinion that the veins that show on the property are fissures and not gash veins."

Complete copies of all these reports can be had of the local agent,
W. L. MARTIN.

INVESTMENTS!

Fortunes are made, not saved. A lifetime of saving will not make you as much as one good investment. A small sum invested in a good proposition, at its beginning, has many times made the investor a fortune.

\$100 invested in Westinghouse stock in 1900 is now worth \$50,000; \$100 invested in an Alaska railroad a few years ago is now worth \$100,000; \$100 invested in Ford Motor Company stock is now worth \$7000; \$100 invested in Verde Extension three years ago is now worth \$8000.

\$100 invested today in United Arizona has a good chance of being as profitable an investment as some of these.

The element of chance is practically eliminated. We are confident of finding large bodies of ore and making a large producer. Better invest one or two hundred dollars in United Arizona while you can get it at 50 cents a share. It is sure to advance and make you some money.

Investigate and be convinced. Examine our ore and get reports. This is an opportunity you may never have again. We can back up every statement we make. But we advise you not to delay if you want stock at the present price. It is going rapidly and we can not guarantee to fill orders at 50 cents a share for any length of time.

TIME PAYMENTS ON 200 SHARES OR OVER.

We will call and talk it over with you if you wish us to do so. Just phone us and we'll be on hand promptly.

W. L. MARTIN
